INTRODUCTION TO FUNCTIONAL ANALYSIS VLADIMIR V. KISIL ABSTRACT. This is lecture notes for several courses on Functional Analysis at School of Mathematics of University of Leeds. They are based on the notes of Dr. Matt Daws, Prof. Jonathan R. Partington and Dr. David Salinger used in the previous years.

### **INTRODUCTION TO FUNCTIONAL ANALYSIS**

This is the accompanying expository notes for an introductory course in Functional Analysis that I was teaching at UVA. The goal of the course is to study the basic principles of linear analysis, including the spectral theory of compact and self-adjoint operators. This is not a monograph or a treatise and of course no originality is claimed.

The current set of notes is an activity-oriented companion to the study of linear functional analysis and operator algebras. It is intended as a pedagogical companion for the beginner, an introduction to some of the main ideas in this area of analysis, a compendium of problems I think are useful in

theory and complex analysis is expected, one need not be an expert, and all of the advanced theory used throughout the text can be found in an appendix. The current text seeks to give an introduction to functional analysis that will not overwhelm the beginner. As such, we begin with a discussion of normed spaces and define a Banach space.

### **An Introductory Course in Functional Analysis**

Functional analysis is the branch of mathematics, specifically of analysis, concerned with the study of vector spaces and operators acting on them. It is essentially where linear algebra meets analysis. That is, an important part of functional analysis is the study of vector spaces endowed with topological structure.

That explains the second word in the name "functional analysis." Regarding functional, "this is an archaic term for a function defined on a domain of functions. Since most of the spaces we study are function spaces, like  $C(M)$ , the functions defined on them are functionals." Thus functional analysis." In particular, we define a linear functional ...
