SPECTRAL ANALYSIS OF SIGNALS - Uppsala University

In mathematics, a self-adjoint operator on a finite-dimensional complex vector space V with inner product $\langle \cdot, \cdot \rangle$ is a linear map A (from V to itself) that is its own adjoint: $\langle Av, w \rangle = \langle v, Aw \rangle$, for all vectors v and w . If V is finite-dimensional with a given orthonormal basis, this is equivalent to the condition that the matrix of A is Hermitian, i.e., equal to its conjugate transpose A^* .

Self-adjoint operator - Wikipedia

Definition and illustration Motivating example: Euclidean space. One of the most familiar examples of a Hilbert space is the Euclidean space consisting of three-dimensional vectors, denoted by \mathbb{R}^3 , and equipped with the dot product. The dot product takes two vectors x and y , and produces a real number $x \cdot y$. If x and y are represented in Cartesian coordinates, then the dot product is defined by

Hilbert space - Wikipedia

This is a text on the rudiments of Functional Analysis in the normed and Banach space setting. The case of Hilbert space is not emphasized. (Here are some examples of books on Hilbert space that I've found useful: Paul Halmos - Introduction to Hilbert Space and the Theory of Spectral Multiplicity, J.R. Retherford - Hilbert Space: Compact Operators and the Trace Theorem, and J. Weidmann ...

Amazon.com: An Introduction to Banach Space Theory

Complex Analysis and Operator Theory (CAOT) is devoted to the publication of current research developments in the closely related fields of complex analysis and operator theory as well as in applications to system theory, harmonic ...
