statistical analysis and the subtlety of formulating precise research questions, it is even more surprising that the statistical literature does not contain an extensive discussion of the meaning of measurement. This paper seeks to make a small step towards filling that gap.

Statistics for Analysis of Experimental Data Catherine A. Peters Department of Civil and Environmental Engineering Princeton University Princeton, NJ 08544 Statistics is a mathematical tool for quantitative analysis of data, and as such it serves as the means by which we extract useful information from data.

'Single measure' applies to single measurements “for example, the rating of judges, individual item scores, or the body weights of individuals. 'Average measure', however, applies to average measurements, for example, the average rating of k judges, or the average score for a k-item test.

Several of the standard methods for analyzing measurement variation are then described and explained, as derived from AIAG’s Measurement System Analysis reference book. The methods include: Gage R&R (ANOVA method, for 3 gages, 3 persons, 3 replicates, and 10 parts), Gage Correlation (for 3 gages), Gage Linearity, and Gage Bias.

and in the proper selection of statistical analyses for experimentally acquired data. John L. Gill [1] states: "statistical analysis too often has meant the manipulation of ambiguous data by means of dubious methods to solve a problem that has not been defined." The purpose of this article is to provide readers with definitions and examples

2. Analysis of correlated data. Statistical analysis of longitudinal data requires methods that can properly account for the intra-subject correlation of response measurements. If such correlation is ignored then inferences such as statistical tests or confidence intervals can be grossly invalid. 3. Time-varying covariates.

When this joint probability is multiplied by the total number of observations, it gives the number of observations that should appear in a cell as the result of random chance. This is the value that would be expected if the null hypothesis is correct.
