A History of Chemical Peeling - Brody - 2000

Acne chemical peel treatments are available in three general types. These are the trichloroacetic acid (TCA) peels, alpha hydroxy acid (AHA) or glycolic acid peels, and phenol peels. AHA remains as the gentlest one. The TCA peels are a little stronger, while the strongest of all is the phenol peels.

All About Acne Chemical Peel | Wellbeing Medical Centre

• Use sun protection before and after performing chemical peels
• Never pull the shedding skin if it is firmly attached
• Do not scratch at your skin after the peel or during the shedding process
• Do not apply the peel to any area where the skin is broken, scratched or open
• Do not indoor tan while performing a series of peels

SKIN-PEEL

A chemical peel is a technique used to improve and smooth the texture of the skin. Facial skin is mostly treated, and scarring can be improved. Chemical peels are intended to remove the outermost layers of the skin. To accomplish this task, the chosen peel solution induces a controlled injury to the skin.

Chemical peel - Wikipedia

This second edition is a step by step guide to chemical peels. Beginning with an introduction to the procedure, an overview of the different types of peels and advice on getting started, each of the following chapters provides more in depth information on different peels and their appropriate use with different types of skin.
