Colposcopy (Ancient Greek: $\kappa\omicron\lambda\upsilon\sigma\kappa\omicron\pi\omicron\varsigma$, translit. kolpos, lit. 'hollow, womb, vagina' + skopos "look at") is a medical diagnostic procedure to examine an illuminated, magnified view of the cervix and the tissues of the vagina and vulva. Many premalignant lesions and malignant lesions in these areas have discernible characteristics which can be detected through the examination.

Colposcopy - Wikipedia

Note: There have been several published reports of ovarian germ cell cancers affecting more than one family member. The rarity of these cancers, (lifetime risk is 0.07%), and the close relationships between affected individuals suggests that a susceptibility gene to germ cell malignancies may be responsible in some families.
